

Instructions for update the STRACK-CAD programme

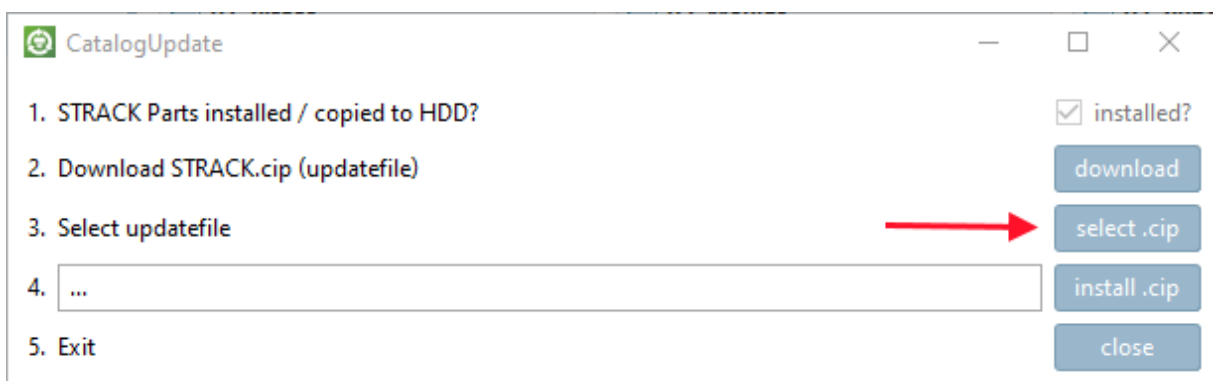

Download the update for the CAD programme:

<https://www.strack.de/links/service/software/programme-und-updates/>.

Please unzip the strack.zip file in a directory on your PC. Start PARTdataManager and select the 'Custom Catalog Update' button in the toolbar:

The command opens the update dialogue window. Now select the strack.cip file unpacked in the directory in the Explorer window.

Click on '**install .cip**' to start the PARTadmin programme.

Select the strack catalogue and confirm the installation of the updated catalogue. To speed up the update process, we recommend selecting the option '**Only keep the new version**' in the settings.

If there is a link from PARTdataManager to the ERP system, an update with the option '**Keep all**' (recommended for ERP) can lead to update times of more than 3 hours.
